

Key Insights Derived From the Analysis

1. Total Premium Collected

- The company collected **₹239,988.5K (≈ ₹239.99 M)** in premiums from **100,000 policies**.
- Policies with **longer tenure (3 years)** contribute **higher premium per policy**, increasing overall premium revenue.

2. Total Claims

- The **total claims paid** during the observed period amount to **₹493,320K (≈ ₹493.32 M)**.
- Claim frequency is **higher during the first few months after the policy start date**, indicating early risk exposure.

3. Loss Ratio

- The **overall loss ratio is 48.65%**, meaning **less than half of the premium collected is paid out as claims**.
- This suggests a **profitable insurance portfolio**, as the company retains **over 50% of the premium as revenue after claims**.

4. Profitability by Policy Tenure

- **Longer tenure policies (3-year plans)** appear to be **more profitable** because:
 - They generate **higher total premium per policy**.
 - Their **claim-to-premium ratio is relatively lower** compared to shorter tenure policies.

5. Monthly Claim Trends

- Claims **peak during the early months of policy initiation**.
- Understanding this **seasonal claim behavior** helps insurers improve **claim reserving and forecasting**.

6. Premium Earned

- Based on **daily premium earning calculations**, the company has **already earned a substantial portion of total premiums by Feb 28, 2026**.
- This assists in **accurate financial reporting and cash flow planning**.

7. Recommendations

- **Monitor policies with higher claim frequencies** and consider adjusting **pricing or reserve strategies**.
- **Promote longer tenure policies**, as they contribute **more stable and profitable revenue**.
- Use **monthly claim trends** to **anticipate future claim payouts and manage cash flow effectively**.

1 Potential Claim Liability

- If all remaining vehicles without claims eventually file one claim, **potential future liability** is estimated at **~₹120 M**.
-

2 Premium Earned

- Using **daily premium calculations**, the company has already earned a significant portion of total premiums by **Feb 28, 2026**.
 - This helps in **financial planning and cash flow management**.
-

3 Dashboard Insights

- **Interactive slicer by Claim Date/Month** allows filtering KPIs and charts by month.
 - Monthly trends and tenure-based analysis can be visualized immediately for **quick decision-making**.
-

4 Recommendations

- Monitor policies with **higher claim frequencies** to adjust pricing or reserves.
- Focus on **longer tenure policies** for profitability.
- Use **monthly trends** to anticipate cash outflows for claims.
